¹ Scfm referenced to 70°F at 1 atmosphere (14.696 psia), Nm³/h referenced to 0°C at 1 atmosphere (0.9869 bar). The maximum process air flow cannot be heated to the corresponding maximum process air delivery temperature. See performance curves on page 3 for correlated air flow and temperature values.

² Assuming 230 - 460 VAC / 3 Phase / 60Hz electrical power. Please contact Eclipse for other electrical power options.

³ Size 8 unit uses two 30 HP (22 kW) motors. Size 9 unit uses two 40 HP (30 kW) motors.

⁴ All weights are approximate.

- See Design Guide 121, to be used in conjunction with the following curves, to complete design and selection.
- All information is based on laboratory testing with neutral (0.0" w.c.) exhaust conditions.
- All inputs based upon gross calorific values and standard conditions: 1 atmosphere, 70°F (21°C).
- Plumbing of gas will affect accuracy of orifice readings. All information based on general acceptable air and gas piping practices.
- Custom designs incorporating larger units or multiple units are available for needs greater than above maximums.
- Eclipse reserves the right to change the construction and/or configuration of our products at any time without being obliged to adjust earlier supplies accordingly.
